

Table 16.12 Estimation of adjusted attributable fractions from logistic regression model for one-year mortality of lung cancer in Haugalandet, Norway 1990–1996.

Risk factor	Coeff.	\widehat{OR}	95% CI	P*	$\widehat{\lambda}_{adj}$	95% CI
Age group				0.011	0.1444	(0.0292, 0.2459)
< 65 years	0.000	1.00	–			
65–74 years	1.032	2.81	(1.40, 5.61)	–	0.0962	(0.0292, 0.1586)
75+ years	0.594	1.81	(0.90, 3.65)	–	0.0482	(-0.0099, 0.1028)
Early diagnosis	2.625	13.80	(4.78, 39.87)	< 0.001	0.7120	(0.3824, 0.8657)
Constant	-1.972					

* P-value from likelihood ratio test
